Indoor/Outdoor Extension Cords

Our 12/3 Outdoor Extension Cords are tailored specifically for the event rental industry and feature a high visibility P.V.C. jacket that withstands rough use, chemicals, moisture, and ozone and provides added flexibility at below freezing temperatures. The molded-on non-slip plugs, available in single tap and triple tap, resist breaking or pulling off. Our white cords are best suited for applications with light backdrops such as white tent tops, sidewalls and white pole covers. For dark backdrops, such as pavement or grass, our 25' black single tap cord is ideal. The 10' molded on triple tap cord is a perfect power source for lighting clusters affixed to center poles. All of our extension cords are U.L. Listed and meet OSHA requirements. See the table below for a complete listing of our single and triple tap extension cord selection.
